

Senior Geotechnical Engineer – Winnipeg, MB

Build the foundation for a lasting and successful career in geotechnical engineering by starting with a good team. From field exploration and laboratory testing to the design and construction management of complex geotechnical structures, our team does work that's rock solid. We perform geotechnical studies to solve pressing infrastructure and construction rehabilitation issues. Sometimes, we break new ground with our ideas. Other times, we're bringing stability to a project. We push the boundaries as leaders and experts in our field and encourage our fellow team members to do the same. Join our team today!

As a **Senior Geotechnical Engineer** you will have the opportunity to work on engineering and geotechnical projects in a multi-discipline project team environment. Working in our **Winnipeg, Manitoba** office where many of Stantec's design projects take place, you will be responsible for developing cost effective, practical geotechnical engineering designs and construction solutions for our clients. This is has an immediate opening for a **Senior Geotechnical Engineer** with strong technical design skills with the communication and organizational skills to manage projects and act as a technical resource for the team.

Responsibilities include but are not limited to:

- Develop and maintain strong client relationships within the Winnipeg region.
- Identify and lead project opportunities and pursuits.
- Manage geotechnical projects, maintaining quality and implementing improvements.
- Work on a variety of small to large projects spanning from transportation, residential, commercial and industrial developments as well as linear corridors and geohazard work.
- Provide senior technical review of geotechnical reports.
- Mentor, coach and train less experienced professionals as required, encouraging growth and succession within the team.

Qualifications:

- Minimum of a Bachelor degree in Civil/Geotechnical Engineering from a recognized university. A post graduate degree in Geotechnical Engineering would be an asset.
- Professional Engineer in good standing with APEGM, or the ability to obtain the professional designation.
- Minimum of 10 years' experience in geotechnical consulting primarily in Manitoba or Western Canada.
- Proven track record in developing and sustaining client relationships.
- Understanding of multi-disciplinary design teams with experience of collaborating across projects.
- Northern experience is also considered an asset.
- An individual with a good business acumen and strong client management experience.
- A self-starter who is innovative and enjoy working in a team environment.

Interested candidates should submit their resume and cover letter in confidence through our website. Committed to the principles of Employment Equity, we thank all candidates; however, only those selected for an interview will be contacted.
