

Engineering Manager

At StandardAero, our people are dedicated to excellence and innovation. We not only do things the right way, we're always looking for a better way – from developing proprietary repair processes to redesigning our facilities to make them among the most efficient in the world. But ultimately, everything we do is to enhance the ownership and operating experience of our customers – to provide the kind of service that gives you peace of mind, knowing the job will be done with skill and precision and that you'll be back in the air in the shortest possible time. That's the standard we'll be judged by, that's the standard we set at StandardAero

In this exciting and challenging role you will be providing leadership and direction to a diverse Production Engineering and Laboratory Services team composed of the Chemistry and Materials laboratories for the StandardAero Components Services (SACS) Canada Business Unit.

Responsibilities:

- Directs the activities and operations of the SACS production engineering and lab teams through assigning, coordinating, reviewing, and participating directly in the design, development and inspection of technical or engineering work/projects.
- Develops and implements standards, policies and procedures for engineering and technical work performed in the relevant department/project team.
- Consults and negotiates with clients to prepare specifications, explain proposals and present engineering reports and findings.
- Assigns, coordinates and reviews the technical work of the department or project teams.
- May participate directly in the design, development and inspection of technical projects or in the engineering work of the department/project team.
- Oversees engineering projects to ensure they are technically sound and in compliance with all internal and external regulatory standards.
- Monitors the progress of on-going projects, makes recommendations for improving the process to meet the needs of the end-users, performs job cost reporting, budget analysis and reporting of overall project control.
- Determines if assistance is required from outside contractors, initiates arrangements, provides technical data and assists contractors with related support services.
- Exercises authority in hiring, training, career development, performance appraisal, salary adjustments, promotion, discipline, health, safety and the general employee relations of direct reports.

Position Requirements:

- University degree in an engineering discipline; or equivalent.
- Supervisory experience.
- Strong planning, organizational, analytical, leadership, interpersonal, decision making, oral and written communication skills.
- Production engineering and/or repair development engineering experience in an aerospace or manufacturing environment.
- Thorough knowledge of aerospace materials and manufacturing processes.
- Strong project management skills
- Ability to make quick decisions in a fast paced and high part volume environment.
- Strong technical writing skills, interpersonal communication skills, and proficient computer skills are a must.
