- Coordinate between internal employees and external contractors
- Develop and implement standard operating procedures (SOPs)
- Coach, mentor, train, and implement development plans for engineering team
- Conduct performance reviews for engineering team
- Assigns coordinate, review, and approve engineering work including specifications, reports, and drawings
- Initiate and execute continual improvement (CI) projects
- Aligns priorities and actions with company objectives
- Participate in root cause analysis of quality issues and make recommendations for improvement
- Provide technical support to Operations and Service as required

#### **Skills Required:**

- Excellent written, verbal communication and documentation skills – must be fluent in written and spoken English
- Process analysis and optimization of parameters based on quality, cost, and production rates
- Facilities layout including cell design and floor plans to optimize efficiency
- Creative thinking and brainstorming to solve complex problems
- Excellent interpersonal skills with the ability to work with cross-functional teams including regulatory, quality, marketing, and executive management
- Ability to analyze, assess, and mitigate risks including project, technical, financial and safety risks.
- Strong analytical skills and attention to detail
- Sound organizational and excellent time management skills
- Demonstrate initiative and ability to work independently

#### **Education and Experience Required:**

- Bachelor’s degree in Mechanical (or Manufacturing) Engineering from accredited University
- Registered Professional Engineer (P.Eng.) with Engineers Geoscientists Manitoba.
- Minimum five years of engineering experience directly related to manufacturing or product design and development.
- Minimum one year of project management or team leadership experience. Previous management experience considered an asset.
- 3D CAD software (e.g. SolidWorks)
- Product design and development, including requirements specifications, prototype development, testing, and certification
- Industrial automation technologies and concepts, manufacturing technologies for plastics including extrusion and injection molding
- Experience in regulated industry and quality systems considered an asset
