

## Crosier Kilgour & Partners Ltd.

CONSULTING STRUCTURAL ENGINEERS

### Who we are:

Crosier Kilgour & Partners is a consulting engineering firm of unique design. While we take our professional responsibility as engineers very seriously, we also brand our work with our distinctively dynamic personality and a fresh perspective.

We are the first choice of clients seeking depth of experience and breadth of knowledge, along with the right balance of innovation and advanced problem-solving techniques. Our clients enjoy working with us because we are good natured, approachable and bring imagination and a sense of exuberance to the careful, skillful work that we do.

Among our company's guiding principles, the most fundamental is our belief that forming lasting relationships is as integral to our business as building durable structures. We have a deep appreciation for the solid relationships we have forged with clients, architects and suppliers around Canada over the past 67 years and look forward to the connections we will make in the future.

Last but not least, we understand that a company is only as good as its people – and our people are great. This is why we confidently invest in our team and in the best technology to help them carry out leading-edge projects and provide innovative solutions to our clients.

Now we are looking to add to our structural design team with someone like you in the role of **Senior Structural Designer/Engineer** within our Structural Consulting Engineering group!

### **Who you are:**

We are hoping that you love structural engineering as much as we do and will be able to jump right in and be part of the team. When you arrive, you will be exposed to a wide variety of projects from small design and analysis tasks to high rise building design and everything in between. Our varied client base and flat organization gives you the opportunity in many different areas of design to see a project through from inception to grand opening and experience what you have designed in real life. We are fortunate to have been involved in many significant projects across the country and are hoping that you share a passion for helping to shape our community on a daily basis.

Your desired assets would include:

- a minimum of 5-10+ years' experience in the design of building structures and components with an ability to work independently to meet project deadlines.
- exposure to structural design and analysis of structures of all kinds with varied materials.
- experience in computer modelling.
- excellent written and oral communication skills.
- adept time management and multi-tasking abilities.
- experience working within a multidisciplinary consultant team.
- experience with site investigations / forensic engineering.
- registration (or eligibility for registration) with EGM or CTTAM.
- And most importantly, a positive and good-natured outlook and desire to be part of the team. We like to work hard but also have a good time doing it!

We offer a competitive salary, a comprehensive group benefit package and pension plan and a supportive and collaborative working environment where you can take root and grow your career!

### **How to connect:**

To find out more about our firm please visit [www.ckpeng.com](http://www.ckpeng.com) or look for us on Instagram @crosierkilgour.

If you are interested in exploring the possibilities of growing in your career with us, we would appreciate the opportunity to discuss with you further.
