

National Exams May 2016
11-CS-2-Engineering in Society – Health and Safety
3 hours duration

Notes:

1. If doubt exists as to the interpretation of any question, the candidate is urged to submit with the answer paper, a clear statement of any assumptions made.
2. This is a Closed Book exam. Candidates may use one of two calculators, the Casio or Sharp approved models.
3. Any five questions constitute a complete paper. Only the first five questions as they appear in your answer book will be marked.
4. All questions are of equal value.
5. Write your answers in point-form whenever possible, but fully. Show all calculations.

Marking Scheme (marks)

1. (i) 7, (ii) 7, (iii) 6
2. (i) 7, (ii) 6, (iii) 7
3. (i) 7, (ii) 6, (iii) 7
4. (i) 6, (ii) 7, (iii) 7
5. (i) 6, (ii) 7, (iii) 7
6. (i) 7, (ii) 7, (iii) 6
7. (i) 7, (ii) 7, (iii) 6

National Exams May 2016
11-CS-2-Engineering in Society - Health and Safety

1. (i) State the engineering activities in general, where the engineers should be able to recognize safety and health hazards and implement controls for them.
(ii) What are the design engineering activities in particular, where the engineers can eliminate, reduce or control safety and health risks?
(iii) What is your understanding of the three Es of safety: engineering, education and enforcement?
2. (i) State the principles and priorities of hazard control that are helpful for selecting controls for hazards.
(ii) What is the purpose of safety devices? Give examples of safety devices.
(iii) Explain the steps followed in accident investigation. What are the investigation tools/equipment used in accident investigation?
3. (i) State the safety practices and safeguards for controlling hand tools hazards?
(ii) State the factors that contribute to manual materials handling injuries, especially low back pain.
(iii) What are the frequently recommended lifting procedures.
4. (i) Explain the characteristics of the following fire detectors: (a) heat detectors, and (b) smoke detectors.
(ii) State the characteristics of the following sprinkler systems: (a) wet-type, (b) dry-type and (c) deluge.
(iii) What is your understanding of the fire suppression systems that do not use water?
5. (i) Explain the general principles that should be followed in selecting personal protective equipment.
(ii) State the various devices used for eye and face protection.
(iii) State the typical respiratory protections used in industry
6. (i) What is your understanding of contingency training in safety?
(ii) What are the training techniques generally used in a company
(iii) State the methods used in promoting safety in industry.
7. A die setter and a co-worker had each rigged a chain around one end of a 5-ton die to move it by crane to a press line. The die setter did not double-check his rigging. As he turned to walk away, his co-worker signaled the crane operator to take up the slack in the chain. The chain which the die setter had rigged was against the keeper pin instead of the die notch. The sudden pressure from the chain caused the keeper pin to shear off; it struck the die setter across the back of the head causing a fracture of his skull and knocking him unconscious.
(i) Determine the cause of the accident.
(ii) State the corrective actions required.
(iii) Suggest the follow-up actions required.
