Operations and Logistics Engineer Job Description

Holz Constructors Incorporated is looking for an Engineer to improve, develop and support its operations and logistics processes and systems as it supplies and installs prefabricated closed panel walls and mechanical pods to commercial and residential construction projects.

We are a leading, growing, innovative prefab/modular construction company located in Winnipeg, Manitoba that takes great pride in the impact we have in the construction industry. We have built many award-winning projects. We also try to build in ways that respect the earth and its resources. We are looking to continue building our team and significantly grow our business.

Along with the Engineer for Special Projects this position will focus on operational excellence and continuous improvement of both shop and site operations, this position will include a large scope of responsibilities and projects. This will include:

- The creation of daily, weekly and monthly performance metrics related to quality, efficiency, cost (material, labour, shipping/transport), schedule compliance/on-time, and health/safety.
- Steady development and improvement of production and logistics processes and systems.
- Formalized and structured continuous improvement methodology, based on best practice
- Problem solving and project management.

This mission-critical role will report directly to the President and has the potential for growth as the company continues to grow.

Role Description

Development/implementation of metrics

Lead Continuous improvement of products and processes.

Communicate with and support all levels of the operation.

Source products/materials, to facilitate customer requirements and/or product improvements.

Coordinate data collection for analysis and improvement.

Work with the Special Projects Engineer to advance the Company's use and understanding of technology.

Connect the Company to the Engineering community

Report progress regularly to the President.

Aid in the hiring and management of engineering co-op students.

Other responsibilities as required.
