

CONSTRUCTION ESTIMATOR

Our client is seeking an Estimator. Join a family-owned group of companies, headquartered in the Winnipeg area, and contribute to the continued growth and success of the company's Northern Construction division in this hands-on, operationally focused role.

The Estimator will leverage full-cycle knowledge of the building industry, including experience across all phases of construction, to accurately assess project costs. In this capacity, the Estimator is expected to assume responsibility for the non-construction aspect of analyzing project specifications, evaluating labor, materials, and equipment requirements, and preparing detailed estimates to guide budgeting and decision-making throughout the construction process.

The Estimator plays a critical role in completing cost estimation and budgeting for residential, commercial, and Ready-to-Move construction projects. This includes collecting contractor quotes, identifying scope of work requirements, evaluating quotes from contractors, and preparing budgets.

The Estimator is expected to create project plans and schedules to provide flexibility and adaptability during project execution while ensuring sub-contractor availability and accurate project timelines. The Estimator also defines the project scope during the preconstruction phase, and collaborates with project teams.

Qualified candidates are invited to submit confidential expressions of interest to akanagwa@waterfordglobal.com
